

COVID-19 Pandemic Review: Lessons Learned for First Nations in Ontario

Reporting on the Period Between March 2020 and January 2022

Prepared by:

Miigwetch to all Contributors

Technical Advisory Committee Members:

- Tracy Antone, Sally Hare, Carmen R. Jones, Tobi Mitchell, Carol Mulder, and Linda Ogilvie.

Robyn Rowe Consulting

- Primary consultant Dr. Robyn K. Rowe and Expert Associate, Dr. Jennifer D. Walker

Key Informants

- This report was made possible by the voluntary contributions of key informants and stakeholders who participated in the COVID-19 response for First Nations in Ontario, Canada.

A photograph of a park in autumn. In the foreground, a black metal park bench sits on a ground covered with fallen orange and red leaves. Behind the bench, several trees with vibrant autumn foliage stand near a body of water. The sky is a clear, pale blue.

Background

Guided by First Nations and information received from the leadership, the Chiefs of Ontario set out to determine what lessons were learned and what sorts of recommendations for future pandemic preparedness could be made, from the perspectives of individuals who were in decision-making, leadership, and advisory roles between March 2020 and December 2021.

Methods Used:

- Document Analysis
- Literature Review
- Virtual Key Informant Interviews
 - Cross section of key First Nation leadership, Health Directors, community members, Elder, COO staff, government (federal, provincial)

Report Highlights

Realities

- Already overburdened
- System's Gaps and Ongoing Colonialism
- Unique Challenges
- Competitiveness (over funding and resources)
- Trauma and Grief

Responses

- Early awareness of COVID-19
- Regional Response
- National First Nations' Response

COVID-19 Interventions

- Lockdowns, Shutdowns, and Closures
- Funding and Supports
- School Closures
- Getting people home
- Evolving Priorities
- Work from Home Measures
- Responding to Diverse Community Needs
- Mental Health and Addictions Response
- Communication and Knowledge Mobilization
- **Data-driven**

Data-driven Responses

As early as March 2020, expert data analysts and epidemiologists within the COO's Health Sector and the Research and Data Management Sector were looking to existing COVID-19 data models being deployed in the United States, to begin understanding:

- 1) what a model would look like for First Nations;
- 2) what existing information was relevant to FNs, and
- 3) how modeling could help to predict the impact of COVID-19 for FNs in Ontario.

Resilience

- Community Strengths During COVID-19
- The Value of Pandemic Planning
- Good Planning, Better Results
- Funding, Research, and Support
- First Nations-led Advocacy
- Going above and Beyond Mandates
- Adapting to Change
- Working from Home
- The Vaccine
- **First Nations' COVID-19 Data and Reporting**

First Nations' COVID-19 Data and Reporting

“We needed to know where the virus was moving. So, you know, which municipalities had cases which First Nations had cases. We needed that to get that information to First Nations.”

- FN Key Informant

Prioritizing Mental Wellness

- Taking care of Mind, Body, and Spirit
- Food Security
- Caring for Each Other
- Protecting our Elders
- Getting Direction from Elders
- Sharing Gifts in Quarantine
- Staying Connected
- Preserving Culture

Resilience

Non-medical
homemade
facemasks and
crafts.

CSA

Repercussions

- Diversity of First Nations' Experiences
- Pandemic Mandates and Remoteness
- Isolation and Overcrowding
- Competition over Resources
- Impacts to Continuity of Care
- Unintended consequences for workers
- Changes in community leadership
- Supply and Demand
- Virtual Environments
- Burden of Technology
- Information Overload
- Duplication of Efforts
- Capacity **including limited reporting capacity**
- **Duplication of Data Efforts**
- **COVAX and Vaccine Data**
- **Ineffectiveness of Vaccine Data Capture**

Key Learnings

During the pandemic, pre-existing health and social inequities became wider.

- There was a framework that was not finalized before COVID-19 pandemic
- Local, provincial and federal public health and pandemic response:
 - Lack of coordination, e.g., funding rollout
 - Didn't take into consideration unique and diverse community needs
- Duplication of efforts, for example data reporting: federal, provincial, community
- Communities exerted sovereignty in their own pandemic responses
- Preparation should include planning for supplies, clarity in responsibilities between communities, PTOs, Tribal Councils, provincially-funded Indigenous health centres
- Measure of staying well needs to go beyond COVID-19 infections.
 - Considerations for unintended mental health, isolation, economic consequences

CSA

Final Words

While efforts to respond to COVID-19 were quick and efficient in many instances, they did not do enough to address long-standing underlying community burdens.

- **Data governance agreements and processes at ICES to get data out quickly was 10+ years in the making.**
- **Pre-existing pandemic plans in some communities were ready.**
- The ability for First Nations to overcome obstacles was highlighted throughout the pandemic.
- Preparation requires genuine commitments to eliminate past harms by providing sufficient resources, funding, support, and capacity.
- All levels of government should work together towards ensuring that First Nations have the necessary policies in place to continue to function effectively and well during any type of emergency, including a pandemic.
- **Need to put together a process to guide and coordinate future responses;**
- **Need a First Nations-led framework that is agreed to by provincial and federal governments;**

CRA
